

**pressure resistant thermal insulation panels made of pressed polyurethane (PU) rigid foam material**

pressure resistant, heat-insulating smart material  
 for universal use in flat or pitched roofs and façade structures

Cover layers double-sided non-laminated

Edge formation all round blunt

- for low thermal bridge connection details  
 - for installation of construction elements  
 - as supporting material for composite constructions

1) Thermal resistance of the insulation panel based on the thermal conductivity nominal values acc. to ETA-18/0604, in compliance with EN 13165. 2) Insulation element U value on the basis of the thermal conductivity nominal value acc. ETA-18/0604. Heat transfer resistances $R_{si} = 0,10$ m <sup>2</sup> ·K/W and $R_{se} = 0,04$ m <sup>2</sup> ·K/W (Heat flow upwards) are calculated; other component layers are not considered. 3) uncontrolled thickness range - we reserve the right to deviations from technical values 4) Lab values, not part of the factory production control and external supervision
